

Altitude0: Lower & Faster - Hardest Speedrun

Flying low is bloody hard, holes are small, and time is counting down. When you make it... That feeling of relief, like your constipation is finally over!

Slovenia, Europe, May 10th, 2017 – Gugila Altitude0 team announced that Altitude0 meets **Speedrun**, bringing **adrenaline rush** to the game.

'We all know flying is hard. How about flying low just above ground? To top it off, Speedrun adds time pressure.'

Altitude0: Lower & Faster is a competitive arcade racing game. It's surely **the lowest flying game ever** - flying literally inches above the ground with tons of collisions. Skills are a must to keep a plane flying insanely low and passing through buildings, tiniest cracks, crazy machines and much more.

Speedrun mode isn't just about beating target time. Players have to achieve time goals on a set of tracks in limited time. Time is ticking and there are enough obstacles to make this really challenging. But when players make it through, prize is waiting for them and so are the rankings.

'Once you press the button to start Speedrun, time is ticking down. There's no time for toilet break, hold it till it's over!'

About Gugila:

We are a game development team based in Slovenia.

We are grounded here but in the game we fly high - no we fly low, that is.
